## GENERAL INFORMATION

### ***Why Should Every State Be Involved?***

The NASAO/FAA non-federal AWOS-III program was developed by NASAO and IWAPI in conjunction with the FAA to provide an essential link between non-federal AWOS-III sensors and the national FAA system. Dissemination into the national network has had far-reaching benefits for the states, local communities and industry stakeholders. Instantly access, analyze and act upon timely information.

### ***Getting Started***

Contact us at [info@iwapi.com](mailto:info@iwapi.com) or 303-526-5995. Upon service activation, simply connect the provided modem to an AWOS-III. The AWOS-III is required to have a NADIN port set to output to METAR. Collected data is processed and sent into the FAA's national system.

### ***Cost***

\$500 one-time setup and \$500 annual fee per AWOS-III. 20% of the annual service fee benefits NASAO. Separate Internet connection or cellular service required.
